

ABSTRACT

This invention relates to combinations of vasoactive substances which act at venous or arterial level with phosphodiesterase inhibitors including phosphodiesterase V, in particular: visnadin or esculoside; at least one compound selected from icarin or derivatives thereof or extracts containing it, *Gingko biloba* dimeric flavones either in the free form or complexed with phospholipids, amentoflavone; at least one compound selected from escin, escin beta-sitosterol complexed with phospholipids, sericoside, sericoside complexed with phospholipids or *Centella asiatica* extract in the free form or complexed with phospholipids. The formulations according to the invention are useful in reducing parmiculopathy and problems associated with venous insufficiency of the lower limbs.
